JUN  
11/28/05

13. (Currently Amended) An optical pickup head which makes a fine movement by a driver, and focuses an incident laser beam to a recording medium for recording/reproducing a data, the optical pickup head comprising:

a single micro mirror having at least one approximately 45° mirror surface for reflecting the incident laser beam perpendicular to an incident direction such that only one micro mirror is mounted in the optical pickup head;

a focusing lens under the micro mirror for primary focusing of the laser beam reflected at the micro mirror;

an SIL (Solid Immersion Lens) under the focusing lens for secondary focusing of the laser beam focused by the focusing lens;

a supporting frame for integrating the micro mirror, the focusing lens and the SIL (Solid Immersion Lens) such that the micro mirror, focusing lens and SIL are held stationary with respect to each other and movement of the supporting frame is controllable by a single driver; and

an air-bearing surface formed under the supporting frame for making the supporting frame buoyant.

14. (Original) An optical pickup head as claimed in claim 13, wherein the 45° mirror surface of the micro mirror has a highly reflective metal coating applied thereto.

15. (Original) An optical pickup head as claimed in claim 13, wherein the micro mirror is formed of a silicon substrate.
